

## Letter to Dr. Frank J. KINSLOW

For many years I have applied my knowledge and experience as a physicist and researcher to studying the latest advances in science in relation to the traditional knowledge of the orient (Qi Gong, Ayurveda, Buddhism and so on).

In researching published material in this area of inquiry, I discovered « La guérison quantique » by Dr Frank J. KINSLOW, together with two of his other books on the subject. I immediately understood that, by chance, I had stumbled across one of those rare individuals « who build the world ». Having worked and travelled all over the world as a scientist, I have already been privileged to meet about ten of these exceptional people... no more.

Dr KINSLOW is incredibly intuitive but also extremely demanding of himself. His sense of humor masks his absolute scientific honesty. I immediately felt that he was clearly superior to almost all other authors who have written on the subject. The method he proposes (Quantum Entrainment) is very simply explained with a humility which is found only in great scientists: the method is simple, well presented and I was immediately able to test its incredible potential. I do not know of any book that explains the existence and power of **pure awareness** better than Dr KINSLOW's. I believe I know the fundamental reason for that: Dr KINSLOW obviously has *a very deep understanding of his relation with other beings on this planet.*

Moreover, he presents practical applications of the method together with the means to verify the efficacy of the process.

In conclusion, I know of very few works with this level of scientific quality and potential. I should add that Dr KINSLOW is currently making a huge effort to share the results of his work with the greatest possible number of people. In my opinion, his teaching is totally validated by the latest advances in Science. In fact we have to go to W. PAULI and C.G. JUNG to find anything like the visionary interaction between pure Science and Psychic and Spiritual healing expressed by Dr KINSLOW in his teaching.

There is no doubt that the work of Dr KINSLOW is an important step for mankind's evolution.

Professor Raymond J. Besson  
C.N.R.S. Silver Medal Award  
W.G. Cady Award (1992 I.E.E.E. Frequency Control Symposium)

**Raymond J. Besson (M'77–SM'80)** was born in Villars-Saint-Georges, France, in 1938. He studied in Besançon and Paris, France. He received the Ph.D. degree in physics in Besançon, France, in 1970, the very day Professor L. Néel, one of his thesis committee members, became a Nobel Prize winner. He is currently Professor of Electronics at École Nationale Supérieure de Mécanique et des Microtechniques, and Deputy Director of Laboratoire de Chronométrie, Électronique et Piézoélectricité since 1978. He also serves part time in the French Ministry, in charge of research. He has authored or co-authored over 70 papers and 50 reports on various research topics that include wave propagation in piezoelectric solids, properties of piezoelectric media, nonlinear effects, resonators, oscillators, frequency and time systems, sensors for pressure, temperature, and acceleration measurements. His present research interests are in frequency standards, space applications, electronics, and micromechatronics. He has actively participated in launching the European Frequency and Time Forum in 1987 and started a company in Besançon, France, in 1991. He has been awarded 16 international patents. He has been awarded several scientific awards including Grand Prix de l'Électronique (1980), Silver Medal of CNRS (1980), National Science and Defense Award (1984), and W. G. Cady Award (1992).
